🌐 shashinduchamika.me

Dedicated, innovative, and self-motivated individual. Adaptable to any software or hardware tools and work environments. Seeking opportunities in software systems. Eager to work with new technologies across various fields. Having expertise in **ReactJs, NextJs, NodeJs, ExpressJS, MongoDB, MySQL, TailwindCSS, Flutter, FireBase**

Experience

- **Associate Software Engineer (In FreeLancing Team)** 2025 June - present
 - Worked as a Full Stack Developer on Toutix, an event organization and ticketing platform built with Next.js and NestJS.
 - Developed responsive, SEO-optimized frontend interfaces and implemented scalable backend APIs following modular architecture.
 - Implemented authentication, authorization, and role-based access control for organizers, admins, and customers.
 - Built a hotel management system for GaneshGarden with guest room booking and reservation features.
 - Developed two standalone restaurant management dashboards to manage guest orders and operations.
 - Contributed to the Schrooler Learning Management System as a frontend developer and collaborated in an Agile team for feature development and bug fixes.
- **Associate Software Engineer (Ceyentra Technologies)** 2025 Mar - 2025 May
 - Worked as a Backend Developer for Sereny, a visa approval management system.
 - Developed backend services and APIs using Node.js, supporting visa application processing and approval workflows.
 - Implemented secure data handling and validation mechanisms to ensure reliability and compliance.
 - Collaborated with cross-functional teams to deliver stable backend functionality and system improvements.
- **Trainee Software Engineer (Ceyentra Technologies)** 2024 Aug - 2025 Feb
 - Successfully completed a Udemy Node.js course, strengthening my backend development skills.
 - Contributed to the Sri Delivery project by developing new features for the admin portal, including integrating a subscription payment gateway for restaurants and implementing location-based notifications.
 - Upgraded target and compile SDK versions for mobile apps, ensuring compatibility with the latest Android standards and improving performance.
 - Gained hands-on experience in both frontend and backend development, enhancing technical proficiency and problem-solving abilities.

Education

- **Sabaragamuwa University of Sri Lanka** 2021 - Present
 - Bachelor of Science Computing and Information System
 - Current GPA: 3.4
- **Scotish Qualification Authority** 2020 - 2022
 - Advanced Diploma in Computer Science

Projects

- **Explainable Tire Defect Detection and Severity Assessment – Individual Research Project**
Technologies Used – Python, TensorFlow/Keras, EfficientNet-B0, OpenCV, SHAP, Grad-CAM
Developed an explainable deep learning system for automated tire defect inspection using a dual-stream EfficientNet-B0 architecture. The model classifies defect types (Crack, Tread Separation, Worn-out, Good) and identifies defect locations (Surface/Sidewall). Integrated Grad-CAM and SHAP to provide interpretable visual explanations of model predictions. Implemented weakly supervised defect size estimation and a severity scoring mechanism to support safety-focused tire damage assessment.
- **Agricultural Monitoring and Controlling System (AQUO) Group Project** [Git Repo](#)
Technologies Used - Flutter, Firebase, Arduino, Openweather API, Google Map API
Role - Full Stack Developer
This is my capstone project, an innovative solution that helps farmers transition from traditional methods to digital methods for achieving agricultural tasks in an efficient and effective way. The mobile app of this system allows users to control and monitor automated watering and fertilizing systems. The system supports making accurate, timely decisions based on real-time sensor data and weather data.
- **Online Courses Registration System (Master MindEd) Individual Project** [Git Repo](#)
Technologies used - React.js, Express.js, Node.js, MongoDB
This web application helps users review courses before registering for them. This application only allows users with system accounts to register for courses. The admin has permissions to manage course information, users, and their activities.
- **Food Ordering Mobile App (S&N Meals) Individual Project / Ongoing** [Git Repo](#)
Technologies Used - Flutter, Express.js, MongoDB
This Mobile application allows user to order foods in effective and efficient way with online payment methods

Skills

- **Frameworks/ Libraries :** ReactJs, NextJs, TailwindCSS, NodeJs, ExpressJs
- **Programming Languages :** JavaScript, TypeScript, Dart, Java, Python
- **DBMS :** MySQL, MongoDB, Firestore
- **Tools/ Technologies :** GitHub, Click Up, Postman
- **Soft Skills :** Leader Ship, Critical Thinking, Problem Solving, Time management, Communication, Creativity, Self Learning

Certificates

- AWS Educate Introduction to Cloud 101 - Training Badge
- Career Essentials in Software Development by Microsoft and LinkedIn.
- Introduction to Generative AI.
- React Basic
- JavaScript Basic
- SQL Basic
- Java Basic
- Python Basic

Extra Curricular Activities

- Member, IEEE student branch of SUSL.
- Member, Society of Computer Science of SUSL
